CIE test I (10)	Assignment / Problem-solving / Seminar (10)	
CIE test II (10)	Total CIE: 40 marks	Course end survey

Semester End Examination: 60 marks

#### Unit 01: INTRODUCTION & ONE-DIMENSIONAL PROBLEMS

9 Hours

Relevance of finite element analysis in design - Variational principles and methods - Weighted-Integral statements - Weak formulations - Ritz method - Method of weighted residuals - Applications of FEA - Finite element modeling - Co-ordinates and shape functions - Potential energy approach - Galerkin's approach - One dimensional finite element models in Solid mechanics and Heat transfer - Finite element model for beams.

CIE test III (10)

#### Unit 02: TWO-DIMENSIONAL PROBLEMS

9 Hours

Poisson equation – Laplace equation – Weak form – Element matrices for triangular and rectangular elements – Evaluation of integrals – Assembly – Axi-symmetric problems – Applications – Conduction and convection heat transfer - Torsional cylindrical member – Transient analysis - Theory of elasticity – Plane strain – Plane stress – Axi-symmetric problems – Principle of virtual displacement.

#### Unit 03: ISOPARAMETRIC ELEMENTS

9 Hours

Introduction – Bilinear quadrilateral elements – Quadratic quadrilaterals – Hexahedral elements - Numerical integration – Gauss quadrature – Static condensation – Load considerations – Stress calculations – Examples of 2D and 3D applications.

#### Unit 04: STRUCTURAL DYNAMICS APPLICATIONS

9 Hours

Dynamic equations – Mass and damping matrices – Natural frequencies and modes – Reduction of number of DOF-response history – Model methods – Ritz vectors – Component mode synthesis – Harmonic response – Direct integration techniques – Explicit and implicit methods – Analysis by response spectra – Example problems.

## Unit 05: NON-LINEAR PROBLEMS & ERROR ESTIMATES

9 Hours

Introduction - Material non-linearity - Elasto Plasticity - Plasticity - Visco plasticity - Geometric non-linearity - Large displacement - Error norms and convergence rates - H-refinement with adaptivity - adaptive refinement.

Theory: 30 Hrs Tutorial: 15Hrs Practical: 0 Project: 0 Total Hours: 45 Hrs

Coı	ntent Beyond Syllabus:
01 Two-dimensional mesh generation – advancing front method 02 Three-dimensional mesh generation – Delaunay triangulation	
02	Three-dimensional mesh generation - Delaunay triangulation
03	Coupled problems

Unit 01: THE DESIGN PROCESS	3	17 (4)	9 Hours

Assignment / Problem-solving / Seminar (10)

Semester End Examination: 60 marks

The Design Process - need identification - Design requirements - Product Life Cycle - Morphology of Design steps of Product Design - Conceptual Design, Embodiment Design, detailed Design - Concurrent Engineering - CAD & CAM, Human factors in Design.

CIE test I (10)

CIE test II (10)

CIE test III (10)

Direct

Total CIE: 40 marks

**Indirect** 

Course end survey

## Unit 02: TOOLS IN ENGINEERING DESIGN

9 Hours .

Creativity and problem-solving, Decision Theory, Modeling - Role of models in Engineering Design, Mathematical modeling, Geometric modeling, finite element modeling, Rapid Prototyping - Simulation Finite Difference method, Monte Carlo method - Optimization - Search methods, Geometric programming, Structural and shape optimization.

## Unit 03: MATERIAL SELECTION AND MATERIALS IN DESIGN

9 Hours

The Classification and properties of Engineering materials, material standards, and specifications - Methods of material selection - Ashby Chart and method of weight factors, Derivation of material indices, Use of material selection Chart, Pugh selection method, selection with computed aided databases - Design for brittle fracture, Design for fatigue failure, Design for corrosion resistance, Designing with plastics.

#### Unit 04: MATERIAL PROCESSING AND DESIGN

9 Hours

Classification of manufacturing processes and their role in the design, Factors determining the process selection, use of process selection chart and computerized database - Design for manufacturing, Design for forging and sheet metal forming, Design for casting, Design for machining, welding, and assembly, design for residual stresses and heat treatment

#### mii 05: LEGAL, ETHICAL ENVIRONMENTAL, AND SAFETY ISSUES IN DESIGN AND QUALITY ENGINEERING

9 Hours

The origin of laws, Contracts, - Liability - Tort Law- Product Liability - Design aspects of product liability, Codes of ethics, solving ethical conflicts. Design for environment - Life Cycle assessment - Material recycling and remanufacture, Design for safety - Potential Dangers and Guidelines for design for safety, Design for reliability failure mode effect analysis, robust Design.

Unit 01: INTRODUCTION	9 Hours
General design principles for manufacturability - strength and mechanical factors, n	nechanisms selection, evaluation
method, Process capability - Feature tolerances - Geometric tolerances - Assembly lin	mits -Datum features - Tolerance

Semester End Examination: 60 marks

stacks.

CIE test II (10)

CIE test III (10)

Total CIE: 40 marks

Course end survey

# Unit 02: FACTORS INFLUENCING FORM DESIGN

9 Hours

Influence of materials on form design - form design of grey iron, malleable iron, steel and aluminium castings - form design of welded members, forgings.

# Unit 03: COMPONENT DESIGN - MACHINING CONSIDERATION

9 Hours

Design features to facilitate machining - drills - milling cutters - keyways - Doweling procedures, counter sunk screws - Reduction of machined area- simplification by separation - simplification by amalgamation - Design for machinability - Design for economy - Design for clampability - Design for accessibility - Design for assembly.

# Unit 04: COMPONENT DESIGN - CASTING CONSIDERATION

9 Hours

Redesign of castings based on Parting line considerations - Minimizing core requirements, machined holes, redesign of cast members to obviate cores. Identification of uneconomical design - Modifying the design - group technology - Computer Applications for DFMA.

# Unit 05: DESIGN FOR THE ENVIRONMENT

9 Hours

Introduction – Environmental objectives – Global issues – Regional and local issues – Basic DFE methods – Design guide lines Example application – Lifecycle assessment – Basic method – AT&T's environmentally responsible product assessment – Weighted sum assessment method – Lifecycle assessment method – Techniques to reduce environmental impact – Design to minimize material usage – Design for disassembly – Design for recyclability – Design for remanufacture – Design for energy efficiency – Design to regulations and standards.

Unit 01	: INTRODUCTION	9 Hours

Need for the compression in product development, History of RP systems, Survey of applications, Growth of RP industry, and classification of RP systems.

#### Unit 02: STEREOLITHOGRAPHY SYSTEMS

9 Hours

Principle, Process parameters, Process details, Data preparation, Data files and Machine details, Applications. SELECTIVE LASER SINTERING - Types of machines, Principle of operation, Process parameters, Data preparation for SLS, Applications.

#### Unit 03: FUSION DEPOSITION MODELING

9 Hours

Principle, Process parameters, Path generation, Applications. SOLID GROUND CURING: Principle of operation, Machine details, Applications.

#### Unit 04: LAMINATED OBJECT MANUFACTURING

9 Hours

Principle of operation, LOM materials, Process details, Applications. CONCEPT MODELERS - Principle, Thermo jet printer, Sander's model market, 3-D printer, Genisys Xs printer, JP system 5, Object Quadra System. LASER ENGINEERED NET SHAPING (LENS) - principle -applications.

#### Unit 05: RAPID TOOLING SOFTWARE FOR RAPID PROTOTYPING

9 Hours

Indirect Rapid Tooling - Silicone rubber tooling, Aluminum filled epoxy tooling, Spray metal tooling, etc. Direct Rapid Tooling, Direct AIM, Quick cast process, Copper polyamide, Rapid Tool, DMILS, ProMetal, Sand casting tooling, Laminate tooling, soft tooling vs hard tooling. STL files, Overview of Solid view, Magics, mimics, magics communicator, etc. Internet based softwares, Collaboration tools. RAPID MANUFACTURING PROCESS OPTIMIZATION - Factors influencing accuracy, Data preparation errors, Part building errors, Errors in finishing, Influence of part build orientation. ALLIED PROCESSES - Vacuum Casting, Surface Digitizing, Surface Generation from point cloud, Surface modification, data transfer to solid models

#### LIST OF EXPERIMENTS

90 Hours •

**Total Hours: 90 Hrs** 

- 1. Introduction to CAD and solid works
- 2. Study of Sectional views and types of keys
- 3. Study of drawing standards

Theory: 0

- 4. Split muff coupling Part, Assembly and Detail drawing
- 5. Protected type Flange coupling Part, Assembly and Detail drawing
- 6. Pipe vice Part, Assembly and Detail drawing
- 7. Screw jack Part, Assembly and Detail drawing
- 8. Simple eccentric Part, Assembly and Detail drawing
- 9. Universal coupling Part, Assembly and Detail drawing
- 10. Plummer block Part, Assembly and Detail drawing
- 11. Claw coupling Part, Assembly and Detail drawing
- 12. Knuckle joint Part, Assembly and Detail drawing
- 13. Bushed Pin type Flexible Coupling Part, Assembly and Detail drawing

EDGE/CATIA / NX / NASTRAN

14. Oldham's coupling - Part, Assembly and Detail drawing

**Tutorial: 0** 

15. Machine Vice - Part, Assembly and Detail drawing

List	t of Equipment:	
01	Computer workstation - 10	
02	Software requirement: CREO /SOLID WORKS /SOLID	$\dashv$

Practical: 60 Hrs

Project: 30 Hrs

Dr. D. SENTHIL KUMAR, ME, Ph.D. PROFESSOR & HEAD DEPT. OF MECHANICAL ENGG. SONA COLLEGE OF TECHNOLOGY JUNCTION MAIN ROAD, SALEM-5.

# **COURSE OUTCOMES:**

At the end of the course, the student will be able to

- 1. Review the literature of the research problem
- 2. Choose appropriate data collection and sampling method according to the research problem.
- 3. Interpret the results of research and communicate effectively with their peers
- 4. Explain the Importance of intellectual property rights
- 5. Evaluate trade mark, develop and register patents.

CONTROL OF THE PARTY OF THE PAR		es the strength of		, 2-Medium, 1-Weak pecific Outcomes (PS	Os)

CIE test I (10) (Theory) CIE test II (10) (Theory) CIE test III (10) (Theory)	Assignment / Problem –Solving /Seminar (10) Total CIE: 40 Marks Semester End Examination: 60 Marks	Course end survey	

#### UNIT I INTRODUCTION TO RESEARCH METHODS

9

Definition and Objective of Research, Various steps in Scientific Research, Types of Research, Criteria for Good Research, Defining Research Problem, Research Design, Case Study Collection of Primary and Secondary Data, Collection Methods: Observation, Interview, Questionnaires, Schedules,

#### UNIT II SAMPLING DESIGN AND HYPOTHESIS TESTING

9

steps in Sampling Design, Types of Sample Designs, Measurements and Scaling Techniques -Testing of hypotheses concerning means (one mean and difference between two means -one tailed and two tailed tests), concerning variance — one tailed Chi-square test.

#### UNIT II INTERPRETATION AND REPORT WRITING

Q

Techniques of Interpretation, Precaution in Interpretation, Layout of Research Report, Types of Reports, Oral Presentation, Mechanics of Writing Research Report

#### UNIT IV INTRODUCTION TO INTELLECTUAL PROPERTY

9

Introduction, types of intellectual property, international organizations, agencies and treaties, importance of intellectual property rights, Innovations and Inventions trade related intellectual property rights.

Poisson e	quation – L	aplace	equation	- Weak form	– Element matri	ces for t	riangul	ar and	rectans	gular

elements - Evaluation of integrals - Assembly - Axi-symmetric problems - Applications - Conduction and

convection heat transfer - Torsional cylindrical member - Transient analysis - Theory of elasticity - Plane strain - Plane stress - Principle of virtual displacement.

#### Unit 03: MULTI-DEGREE FREEDOM SYSTEM

9 Hours

Normal mode of vibration – Flexibility Matrix and Stiffness matrix – Eigen values and eigen vectors – Modal Analysis – Forced Vibration by matrix inversion – Modal damping in forced vibration – Numerical methods for fundamental frequencies.

#### Unit 04: VIBRATION OF CONTINUOUS SYSTEMS

9 Hours

Systems governed by wave equations – Vibration of strings – vibration of rods – Euler Equation for Beams – Effect of Rotary inertia and shear deformation – Vibration of plates.

#### Unit 05: EXPERIMENTAL METHODS IN VIBRATION ANALYSIS

9 Hours

Vibration instruments – Vibration exciters Measuring Devices – Analysis – Vibration Tests – Free and Forced Vibration tests. Examples of Vibration tests – Industrial, case studies.

Unit 01: OIL HYDRAULIC SYSTEMS AND HYDRAULIC ACTUATORS	9 Hours
Hydraulic Power Generators – Selection and specification of pumps, pump characteristics volumetric, mechanical and overall efficiencies of positive displacement pumps. I Actuators – selection, specification and characteristics.	s- Determination of Linear and Rotary
Unit 02: CONTROL AND REGULATION ELEMENTS	9 Hours
Pressure - direction and flow control valves - relief valves, non-return and safety valves -	actuation systems.

Semester End Examination: 60 marks

Electrical control solenoic	d valves, relays, El	ectro hydraulic s	ervo valves.		y	
Unit 03: HYDRAULIC C	Jnit 03: HYDRAULIC CIRCUITS 9 Hours					
Reciprocation, quick return, sequencing, synchronizing circuits - accumulator circuits - industrial circuits -						
press circuits - hydraulic	milling machine	- grinding, plan	ning, copying, - f	orklift, ear	th mover circuits-	
design and selection of co	omponents - safety	and emergency r	nandrels.			
Unit 04: PNEUMATIC SYSTEMS AND CIRCUITS 9 Hours						
Pneumatic fundamentals - control elements, position and pressure sensing - logic circuits - switching circuits						
- fringe conditions modules and these integration - sequential circuits - cascade methods - mapping methods						
- step counter method - co	ompound circuit de	sign - combination	on circuit design.			
Unit 05: INSTALLATION, MAINTENANCE AND SPECIAL CIRCUITS 9 Hours						
Pneumatic equipments- selection of components - design calculations - application -fault finding - hydro						
pneumatic circuits - use of microprocessors for sequencing - PLC, Low cost automation - Robotic circuits.						
Theory: 45 Hrs

#### LIST OF EXPERIMENTS

60 Hours

- 1. Nodal Displacement of 1-D Bar.
- 2. Displacement and thermal stress of taper Plate.
- 3. Nodal displacement of truss member.
- 4. Nodal displacement of thermal stress due to static and thermal load.
- 5. Stress and deflection analysis in beams with different support conditions.
- 6. Deflection of beam with roller.
- 7. Displacement and Von-Misses stress rectangular plate under plane stress.
- 8. Displacement in a thin plane with a circular hole.
- 9. Thermal analysis of a beam
- 10. Stress analysis of an Axi-Symmetric component.
- 11. Model analysis of a cantilever-2D plate.
- 12. Structural analysis of an L-Bracket.
- 13. Harmonic analysis of a cantilever beam.
- 14. Heat transfer in a fin.
